DATA MINING TECHNIQUES FOR

ENHANCING PRODUCT STOCKPILE MANAGEMENT

ABSTRACT OF THE DISCLOSURE

A computer method for enhancing product stockpile management. The

5   method includes the steps of providing a demand database comprising a

compendium of individual demand history; providing a supply database

comprising a compendium of at least one of product stockpile management

solutions, product stockpile information, and product stockpile diagnostics; and,

employing a data mining technique for interrogating the demand and supply

10   databases for generating an output data stream, the output data stream

correlating demand problem with supply solution.
